

In situ SST Quality Monitor Version 2 (iQuam2)

[***www.star.nesdis.noaa.gov/sod/sst/iquam/v2***](http://www.star.nesdis.noaa.gov/sod/sst/iquam/v2)

Xinjia Zhou^{1,2}, Alexander Ignatov¹, Feng Xu^{1,3,4}

¹NOAA STAR; ²Colorado State University/CIRA; ³GST Inc.; ⁴Fudan University, China

- ❑ NOAA is responsible for a wide range of satellite SST products from polar and geostationary satellites to high resolution (1/4°) SSTs.

"In situ"

- Coverage
- Includes (drift)
- Uniformity
- Precision
- Latency

- ❑ The iQuam but has product

- ✓ European
- ✓ NASA
- ✓ University
- ✓ Center
- ✓ Japan
- ✓ Chinese Ocean University Haiyang and Fengyun satellites

for satellite Cal/Val

in wider

with minimal

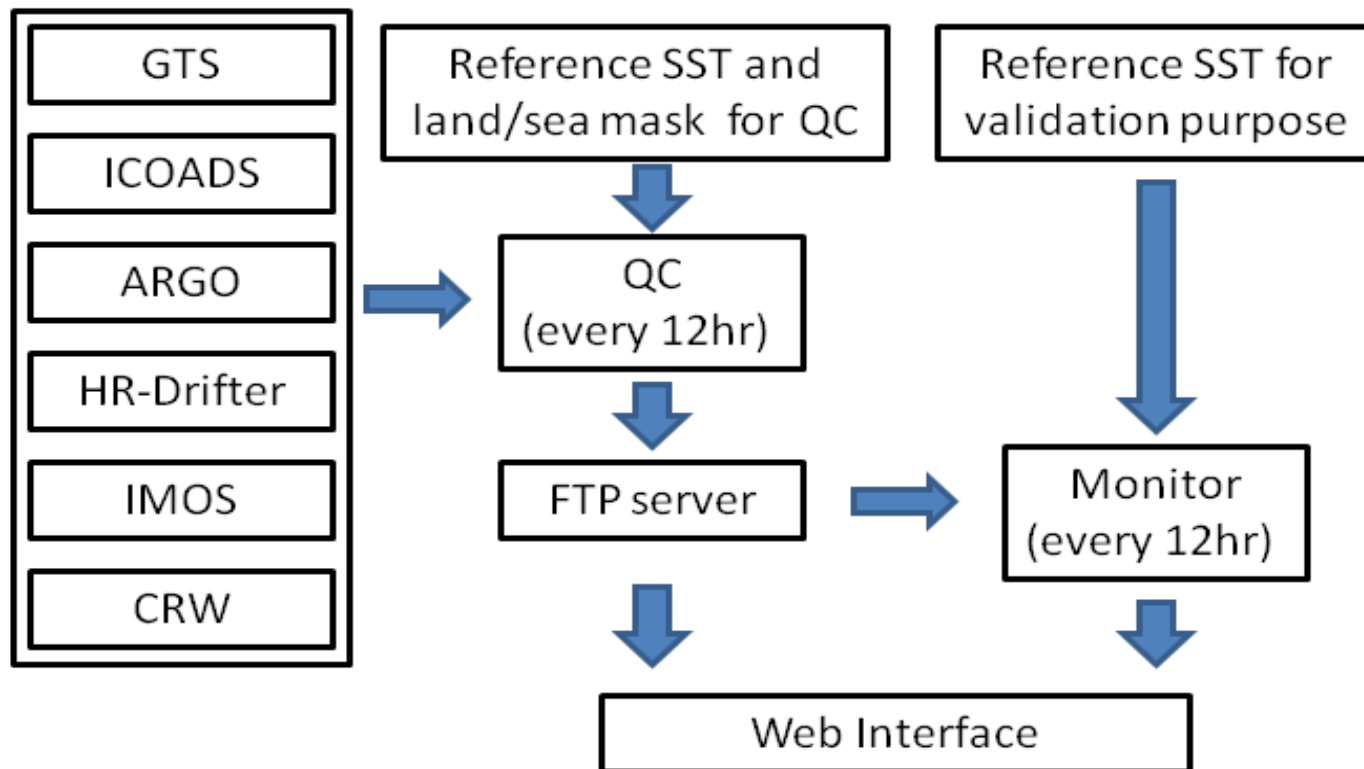

applications,
Cal/Val of SST

As iQuam user community grows, it requested several enhancements:

- ☐ Extend time series to full satellite era (Sep 1981 – on)
- ☐ Improve QC
 - The 2nd reference SST (CMC)
 - Performance history check (iQuam check similar to the UKMO/CMS “black lists”)
 - CMS black list; and individual QFs from data producers (ICOADS, ARGO, IMOS)
- ☐ Improve web interface
 - Redesign web engine (from flash player to High Charts)
 - Add daily statistics
 - Enhance graphics (interactive display, and print/save functions)
- ☐ Add new *in situ* data
 - ARGO Floats (in NRT and post-processing modes)
 - High-Resolution Drifters
 - IMOS Ships
 - Coral Reef Watch buoys
- ☐ Change output data files to NetCDF4, maximally reconcile with GHR SST GDS2

The iQuam is a web-based near-real time system. It performs 3 major functions

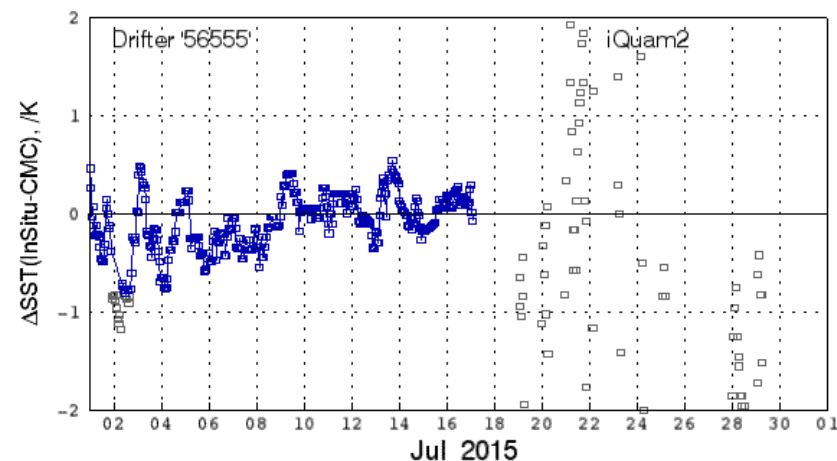

- Ingests various *in situ* SSTs, and performs a uniform Quality Control (QC)
- Monitors QCed *in situ* SSTs online
- Serves reformatted *in situ* SST data with quality flags appended

Category	Check	Type of error handled	Physical basis
Preprocessing	Duplicate Removal	Duplicates arise from multiple transmission or data set merging	Identical space/time/ID

PI

$$REF_probability = \frac{0.1 * Apriori_possibility}{0.1 * Apriori_possibility + OP[ind] * (1 - Apriori_possibility)}$$

NetCDF with Quality Flags

☒ Data
☐ Log

Data are in self-documented NetCDF4 format. Refer to attributes for more information.

Suggested usage of *quality_level*:

- high-accuracy applications:
quality_level == 5
- general applications:
quality_level == 4
- advanced users: refer to definitions of *iquam_flags* and *original_flags*.

All statistics in iQuam page are for "high accuracy" data only, i.e. (*quality_level* == 5).

Quality level and flags are only set for SST. Other measurements in iQuam have not been QCed.

Data are organized in monthly files. Latest file is refreshed every 12hrs with a 2hr latency.

All data are available via [ftp](#).

Fig. 6: iQuam2 file list for user download

- ✓ Longer time series to cover full satellite era (Sep 1981 – on)
 - ✓ Improved QC
 - ✓ Improved web interface
 - ✓ Add more *in situ* data
 - ✓ Change output data files to NetCDF4
-
1. Collect users' feedback and implement iQuam2. Retire iQuam1.
 2. Archive w/GHRSST (PO.DAAC/NODC). Document in literature.
 3. Transition to *iQuam2* in all NOAA Cal/Val applications including SQUAM.
 4. Work towards *iQuam3*
 - a) Add more *in-situ* data types from SAMOS Ships, Ocean Profilers et al.
 - b) Test 3-way error analysis, to determine errors in individual *in situ* data

● This work is supported by JPSS, GOES-R, and NOAA (PSDI/NDE/ORS) Programs.

● We thank them for help and collaboration

The background of the slide is a photograph of a vast, calm ocean under a bright blue sky. The sun is visible in the upper center, creating a shimmering reflection on the water's surface. Scattered white clouds are visible in the sky. The water transitions from a deep blue in the distance to a lighter turquoise near the foreground.
