

# Current and Emerging Science (R&D to Users!) Activities in STAR's Satellite Oceanography and Climatology Division

Paul M. DiGiacomo, Ph.D.

Chief, SOCD & CoastWatch/OceanWatch Program Manager

Veronica Lance, Ph.D.

CoastWatch/OceanWatch Program Scientist

CICS Science Meeting

30 November 2016

# NOAA: Making Science Matter

## *Environmental Intelligence*

Observations → Monitoring → Assessment → Modeling → Tools & Services

### *NOAA's long-term goals*

1. Climate Adaptation and Mitigation
2. Weather-Ready Nation
3. Healthy Oceans
4. Resilient Coastal Communities and Economies

# NOAA/NESDIS Center for Satellite Applications & Research (STAR):

*To advance remote sensing science and technology to better inform the American public and safeguard the environment .*

- Active engagement of users (*science-based understanding of requirements*)
  - Facilitate end-to-end value chain for satellite observations (*“translate” obs to info*)
  - Pursue measurement-based approach (*mission-agnostic, ensure continuity for users*)
  - Generate data of highest possible quality (*no short-cuts!*)
  - Provide satellite data products that are fit for purpose (*new operational paradigm*)
  - Ensure user satellite data needs are met (*existing as well as emerging/evolving*)
- NB: the value of our (environmental data) products is zero until they are used to improve societal outcomes (Jeff Adkins, NOAA social scientist).

# Mission Agnostic, Measurement-based approach in support of users: Ensuring continuity & coverage

## SOCD Organization

## Science Teams: R&O

SOCD Chief: *Dr. Paul M. DiGiacomo*

### Ocean Sensors Branch

Chief: *Dr. Alexander (Sasha) Ignatov*

- Sea Surface Temp, Ocean Winds, Ocean Optics & Water Quality (e.g. Chesapeake Bay)

### Marine Ecosystems & Climate Branch

Chief: *Dr. Menghua Wang*

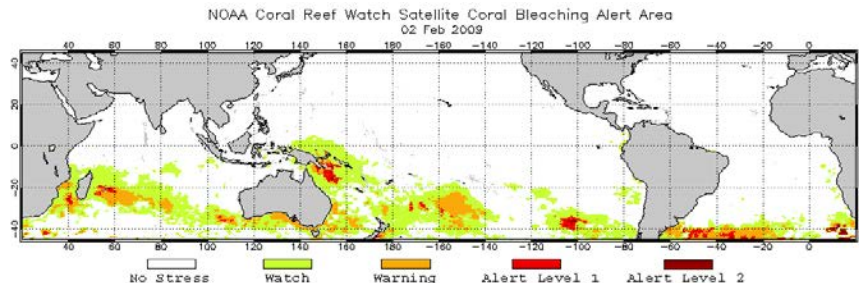

- Ocean Color, Coral Reefs, Sea Ice, Synthetic Aperture Radar, Blended SST

### Laboratory for Satellite Altimetry

Chief: *Dr. Laury Miller*

- Sea Level, Bathymetry, Waves, Sea Ice/Climate

- Sea Ice
- Sea Surface Height
- Sea Surface Roughness
- Sea Surface Salinity
- Sea Surface Temperature
- Ocean Color Radiometry
- Ocean Surface Vector Winds
- CoastWatch/OceanWatch
- Coral Reef Watch
- PolarWatch

## Major Programs/Activities

- JPSS: Ocean Color & SST EDRs
- GOES-R: SST (& Ocean Dynamics)
- JASON Satellite Radar Altimeter Program
- NOAA GCOM Program Scientist
- National Ice Center Chief Scientist
- Foreign Sensors: Winds, SAR, etc
- Marine Optical BuoY (MOBY)
- Coast/Ocean/PolarWatch & Coral Reef Watch

# Jason Satellite Radar Altimeter Program

---

24+ year CEOS global reference record of sea level

Led by NOAA and its operational partner, EUMETSAT, in collaboration with NASA, CNES, and soon ESA and the EC for Jason-CS in 2020.

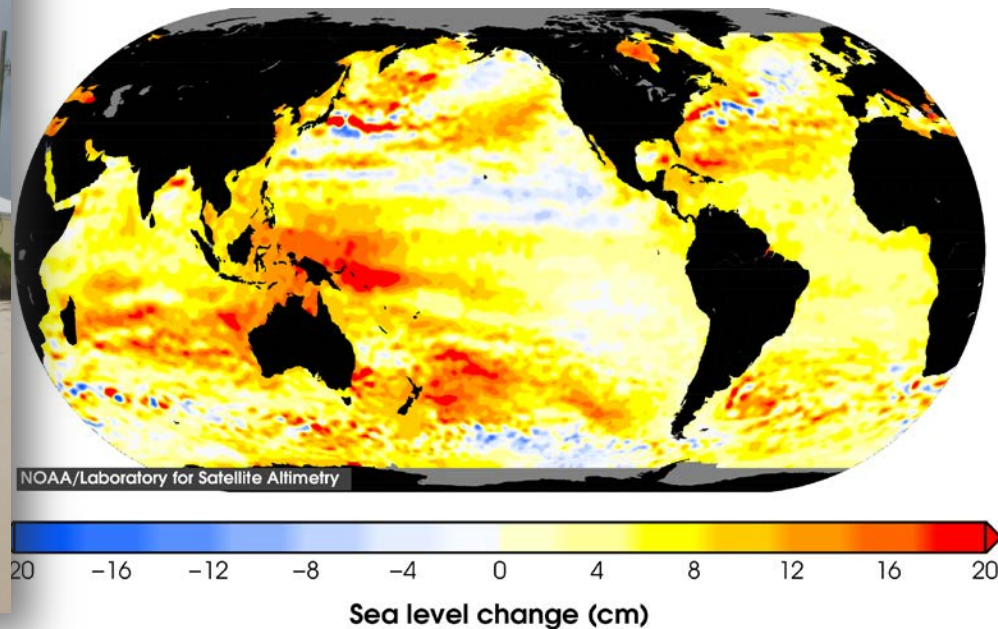

# STAR Laboratory for Satellite Altimetry

**Global mean sea level anomaly:  
TOPEX/Poseidon, Jason-1, Jason-2**

**Total sea level change since 1993**

# Jason Applications & End Users

Sea Level Anomaly –"Ocean Weather"- Feb 3-13, 2014

High Wave Forecasting

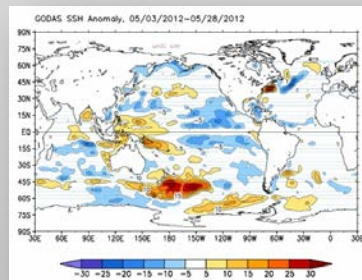

Coast Guard Search & Rescue

Oil Spill Monitoring

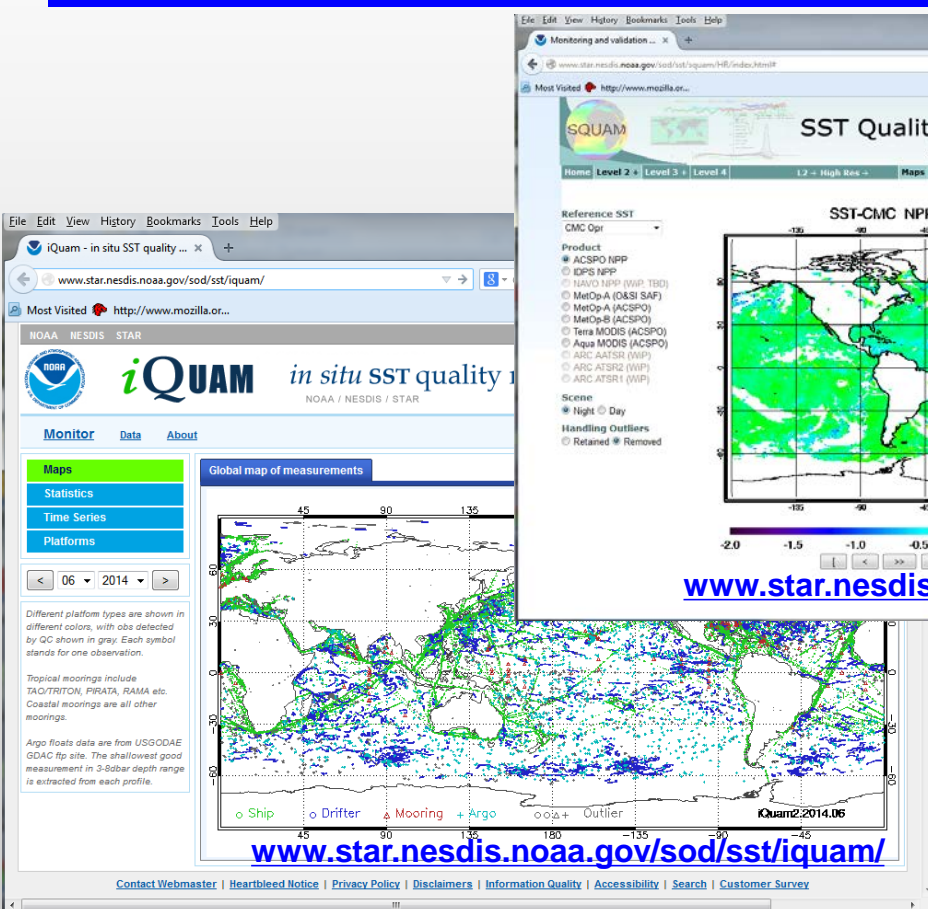

# NOAA SST Monitoring: Bringing Community Together

Today, STAR leads community efforts and brings together NOAA and partners' SST products

[www.star.nesdis.noaa.gov/sod/sst/micros/](http://www.star.nesdis.noaa.gov/sod/sst/micros/)

[www.star.nesdis.noaa.gov/sod/sst/squam/](http://www.star.nesdis.noaa.gov/sod/sst/squam/)

[www.star.nesdis.noaa.gov/sod/sst/iqum/](http://www.star.nesdis.noaa.gov/sod/sst/iqum/)

Products are monitored online in near-real time, to ensure high quality & consistency, to support and facilitate SST applications

# Local & Regional SST Products (LEO & GEO)

GOES SST, 17 Oct 2016

VIIRS SST, 7 Nov 2016

# Polar SST Production and Monitoring Systems at NESDIS/STAR

---

## **ACSPO - Advanced Clear-Sky Processor for Oceans**

- ✓ Used for AVHRR Operations & Reprocessing
- ✓ Used for VIIRS Operations & to be used for reprocessing
- ✓ Can be potentially used for MODIS (re)processing

## **SQUAM - SST Quality Monitor** [www.star.nesdis.noaa.gov/sod/sst/squam/](http://www.star.nesdis.noaa.gov/sod/sst/squam/)

- ✓ Monitor SST Products (L2, L3, L4) for Self- and Cross-Consistency; Validate against *in situ* SSTs (*iQuam*)

## **MICROS - Monitoring IR Clear-sky Radiances over Oceans for SST**

[www.star.nesdis.noaa.gov/sod/sst/micros/](http://www.star.nesdis.noaa.gov/sod/sst/micros/)

- ✓ Monitor Clear-sky ocean radiances for Self- and Cross-Consistency; Validate against CRTM simulations

## **iQuam - In situ Quality Monitor** [www.star.nesdis.noaa.gov/sod/sst/iquam/](http://www.star.nesdis.noaa.gov/sod/sst/iquam/)

- ✓ QC *in situ* SSTs, Monitor on Web, Distribute to users

## **ARMS - ACSPO Regional Monitor of SST** <http://www.star.nesdis.noaa.gov/sod/sst/arms/>

- ✓ Global SST monitoring in SQUAM is supplemented by ARMS system, focusing on geographical regions of interest, e.g., US coastal regions and other regions worldwide

# 5-km Global Blended SST Analysis

- Produced daily from operational Polar and Geo-SST data.
- Product benefits from available non-NOAA SST data, especially for other basins

<http://www.ospo.noaa.gov/Products/ocean/sst/contour/index.html>

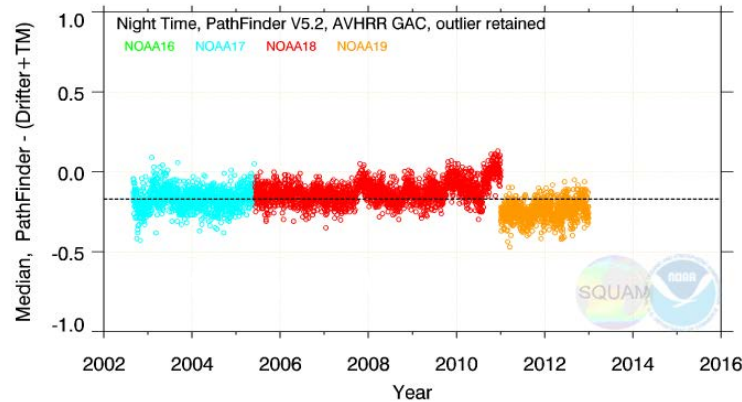

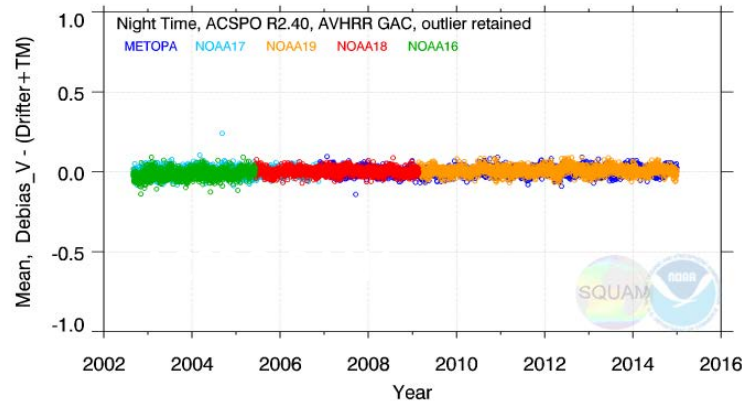

# AVHRR Reanalysis v1 (2002-pr)

## Ignatov et al., *Remote Sens.*, 2016

### Global Bias with respect in situ SSTs

- 13+ years of AVHRR data (2002-pr) reprocessed from 7 satellites using NOAA ACSPO system
- Delivered to STAR geo-polar blended SST team for use by NOAA Coral Reef Watch
- Product is more accurate and uniform than the widely used Pathfinder SST dataset
- Work is underway to archive with JPL PO.DAAC and NCEI

# Coral Reef Watch

# Satellite Ocean Surface Vector Winds

## ASCAT Daily Coverage Example

- OSVW data supports wind and wave warning and forecasting
- ASCAT data from EUMETSAT operational at NOAA
- SCATSCAT data from ISRO next up for implementation
- NOAA P-3 used to fly a profiling scatterometer system (IWRAP) for validation and improvement of satellite algorithms in tropical (hurricanes) and extratropical cyclone conditions

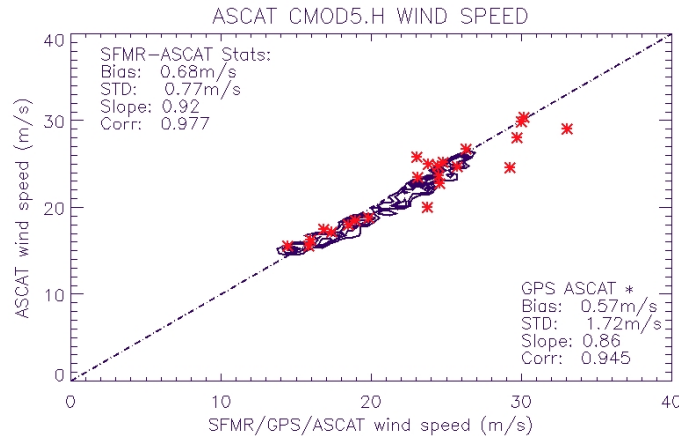

Goal: Provide the best possible product and training to end users

# ASCAT High Wind Speed Retrieval Improvement

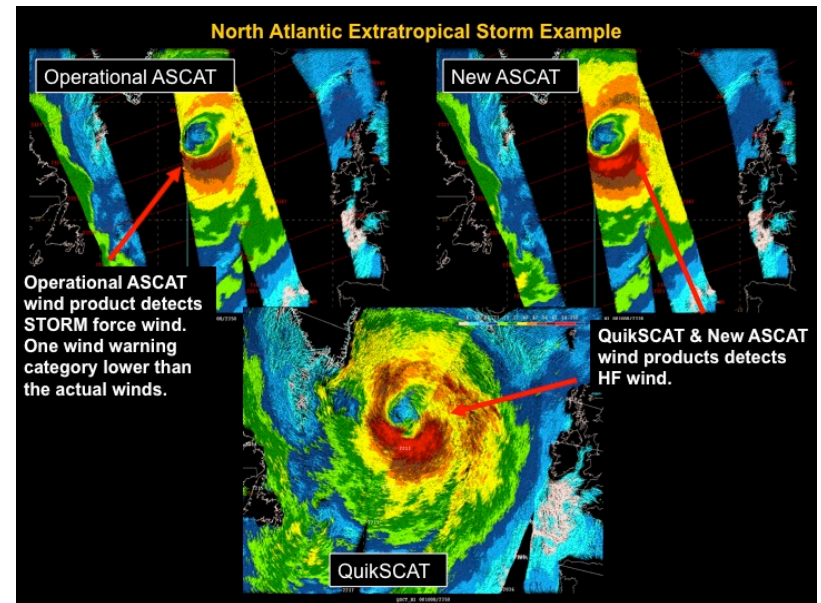

**New ASCAT winds versus SFMR and GPS dropsonde winds**

**Flight track overlaid on ASCAT swath**

- ASCAT high wind speed improvements developed utilizing aircraft and satellite data

**Hurricane force wind observations with NOAA's QuikSCAT and original and new ASCAT wind products**

# Satellite Sea-Surface Salinity Science Team

## Current & Emerging Efforts

### • Data

- SSS Level-2 /3 data records acquired for NASA's Aquarius & ESA's SMOS missions
- Data set development in support of applications and climatology
- Ocean color radiometry for coastal/estuarine areas

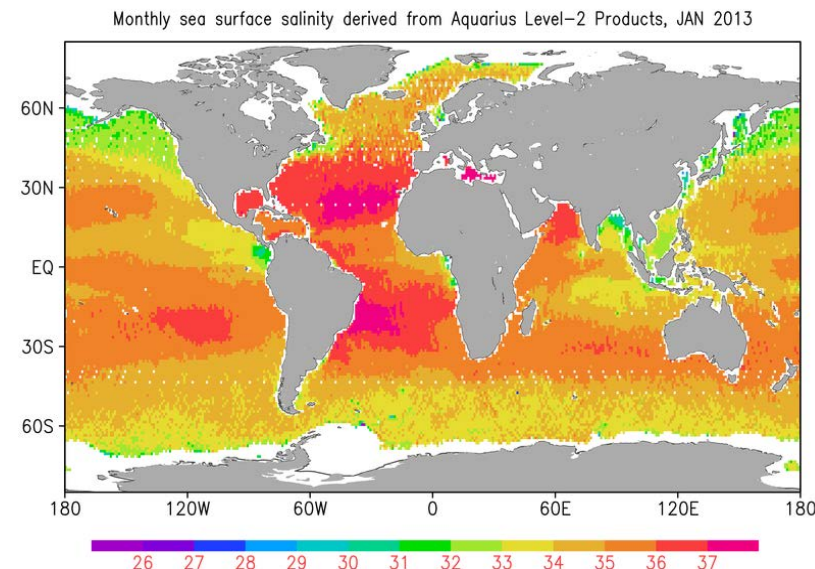

### • Quality

- Online quality monitoring and assessment - automation, statistics, visualization:  
[Satellite Sea-Surface Salinity Quality Monitor \(4SQM\)](#)
- NESDIS/Center for Satellite Applications and Research (STAR)
- NESDIS/National Centers for Environmental Information (NCEI) / CICS

### • Assimilation

*Working with users to incorporate SSS data*

- National Weather Service (NWS):  
Real-Time Ocean Forecast System (RTOFS)
- NWS seasonal-interannual:  
Global Ocean Data Assimilation System  
/ Coupled Forecast System (CFS)

# Interactive and Automated Techniques for Oil Spill Analysis Using (SAR) Imagery

**Deepwater Horizon Fire**  
4/21/2010

## EXPERIMENTAL MARINE POLLUTION SURVEILLANCE REPORT

Analysts Provided by: The National Oceanic and Atmospheric Administration/National Environmental Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: May 02, 2010  
REPORT TIME: 1445Z (0945 CDT)  
ANALYST: WARREN

DATA SOURCE: ENVISAT ASAR VV © ESA 2010  
MODE: WIDE SWATH  
RESOLUTION: 150 Meters  
IMAGE DATE/TIME: 5/02/2010 0351Z (5/01/10 2251 CDT)

**Legend**

- Anomaly
- Location of Deepwater Horizon Platform: [28°44'12" N / 88°23'14" W]
- 1,560 km<sup>2</sup> Estimated Area of Anomaly

### REMARKS:

Anomaly (oil slick) has drifted eastward from previous day's analysis and continues to track northward toward the ALMS coastline. In general, the slick becomes more streak-like north of 29° N. This is potentially due to the strong winds dispersing the oil more as it moves away from the source point.

This is an experimental product of the Satellite Analysis Branch and not operationally maintained. We will do our best to make it available in a timely manner.

## TCNNA Analysis GOM Oil Spill. Envisat May 2

**Symbology**

- Oil Spill

Analysis  
TCNNA Output on May 2, 2010 ENVISAT SAR  
2274 Km<sup>2</sup> were detected as surface waters containing oil.

Strong winds indicates that this area contains very heavy hydrocarbons that still damps capillary waves. It is possible to infer that a larger area contains oil that is not detected due to the high winds

Interactively derived Marine Pollution Surveillance Report issued by NESDIS/OSPO Satellite Analysis Branch for May 2, 2010, during the Deepwater Horizon incident.

Automated Texture Classifying Neural Network (TCNNA) oil spill map for the same day. This algorithm is being developed in a collaboration between NESDIS/STAR and Florida State University for possible use as an automated oil spill mapping tool.

# VIIRS Climatology Chlorophyll-a Image

Log scale: 0.01 to 64 mg/m<sup>3</sup>

Climatology from 2012/04 to 2014/10

# Significantly Improved VIIRS Water Property Data Over High Altitude Lakes

High Altitude Lake Victoria (1133 m) and Lake Tanganyike (773 m)

New Data Reprocessing

Previous Data

VIIRS mission-long ocean color data have been successfully reprocessed using improved MSL12. VIIRS ocean color data over open oceans and coastal/inland waters have been significantly improved, in particular, over high altitude lakes. This is a significant progress for remote sensing of inland water quality.

## Satellite Ocean Color Product Development

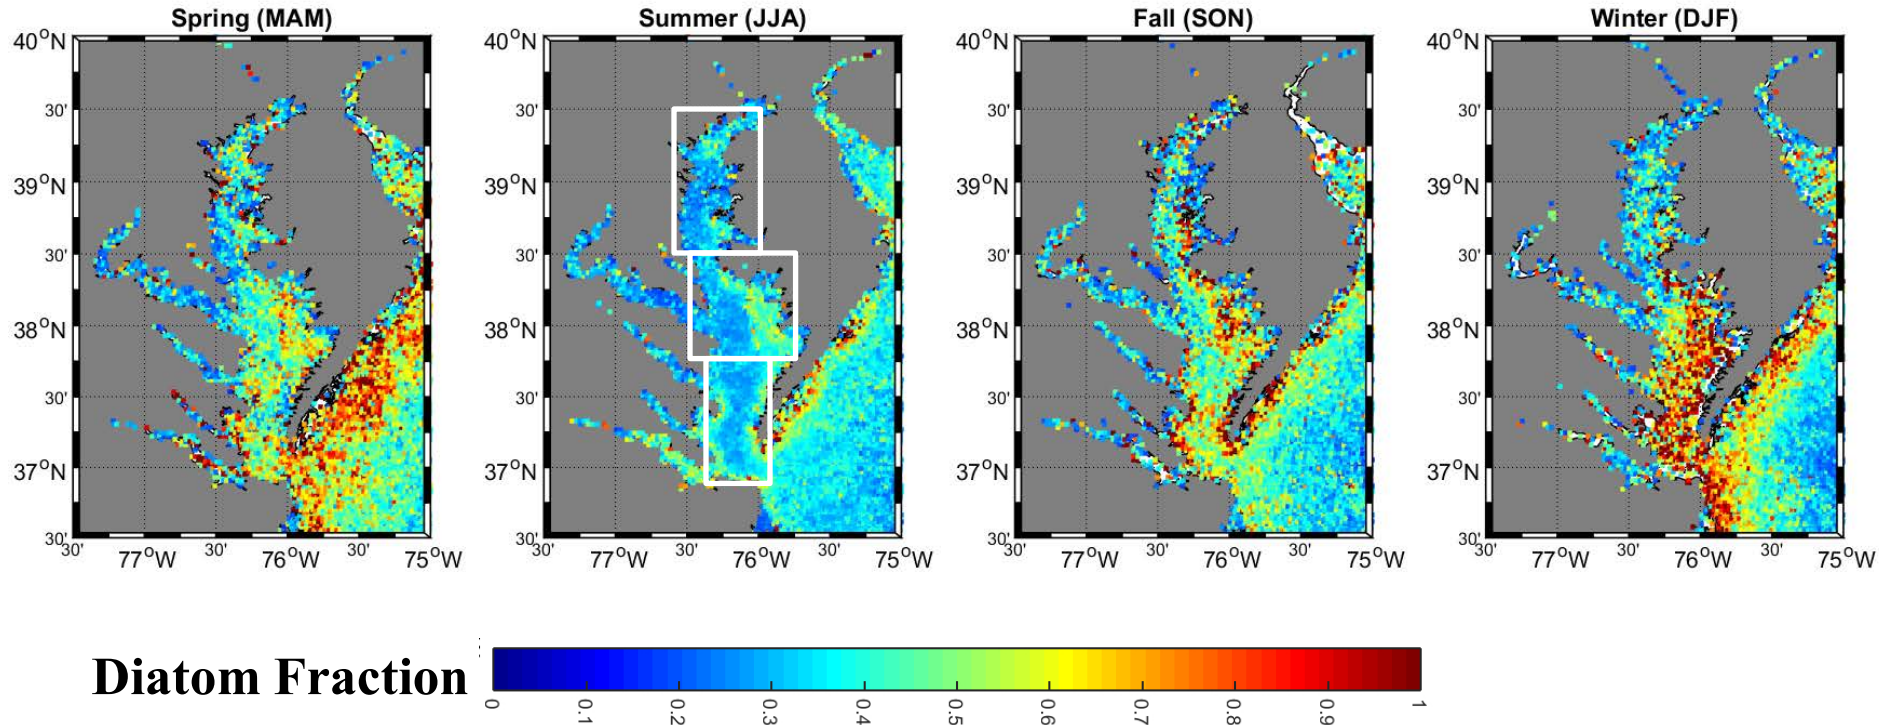

NOAA Coral Reef Watch and NOAA/NESDIS' Ocean Color Team are working closely with partners in the U.S. Coral Reef Task Force (USCRTF) Watershed Working Group (WWG) to develop pilot satellite ocean color products using data from the [Visible Infrared Imaging Radiometer Suite \(VIIRS\)](#) aboard the [Suomi National Polar-orbiting Partnership \(S-NPP\)](#) [satellite](#) operated by the [NASA-NOAA Joint Polar Satellite System \(JPSS\)](#).

From [Coral Reef Watch](#)

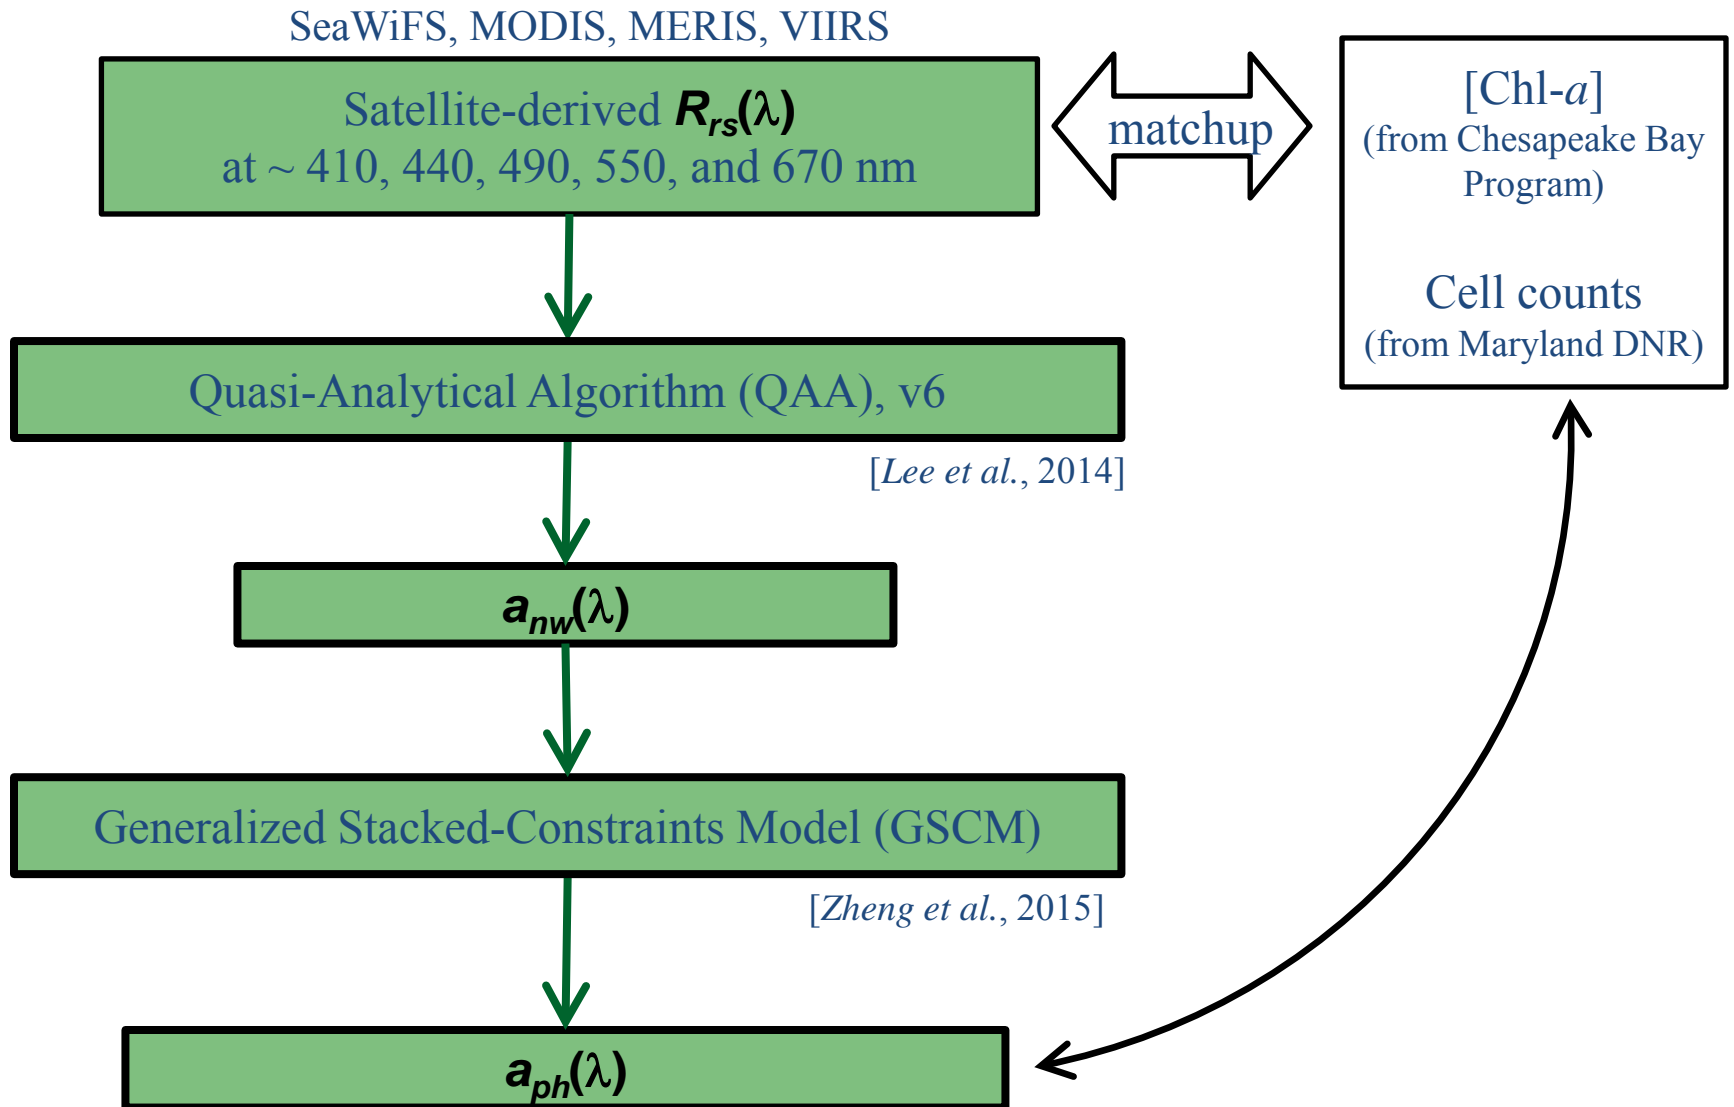

# Diatom fraction based on $a_{ph}(670)/a_{ph}(440)$ : VIIRS Seasonal Climatology (2012-2016)

- Lowest diatom fraction occurs in summer, a well known feature in this region.
  - Diatom-dominated spring bloom is most evident in coastal waters outside of the bay.
  - Strongest diatom domination in the lower bay during winter?
- G. Zheng and P. DiGiacomo,  
2016 Ocean Optics Meeting

# Flowchart of data processing

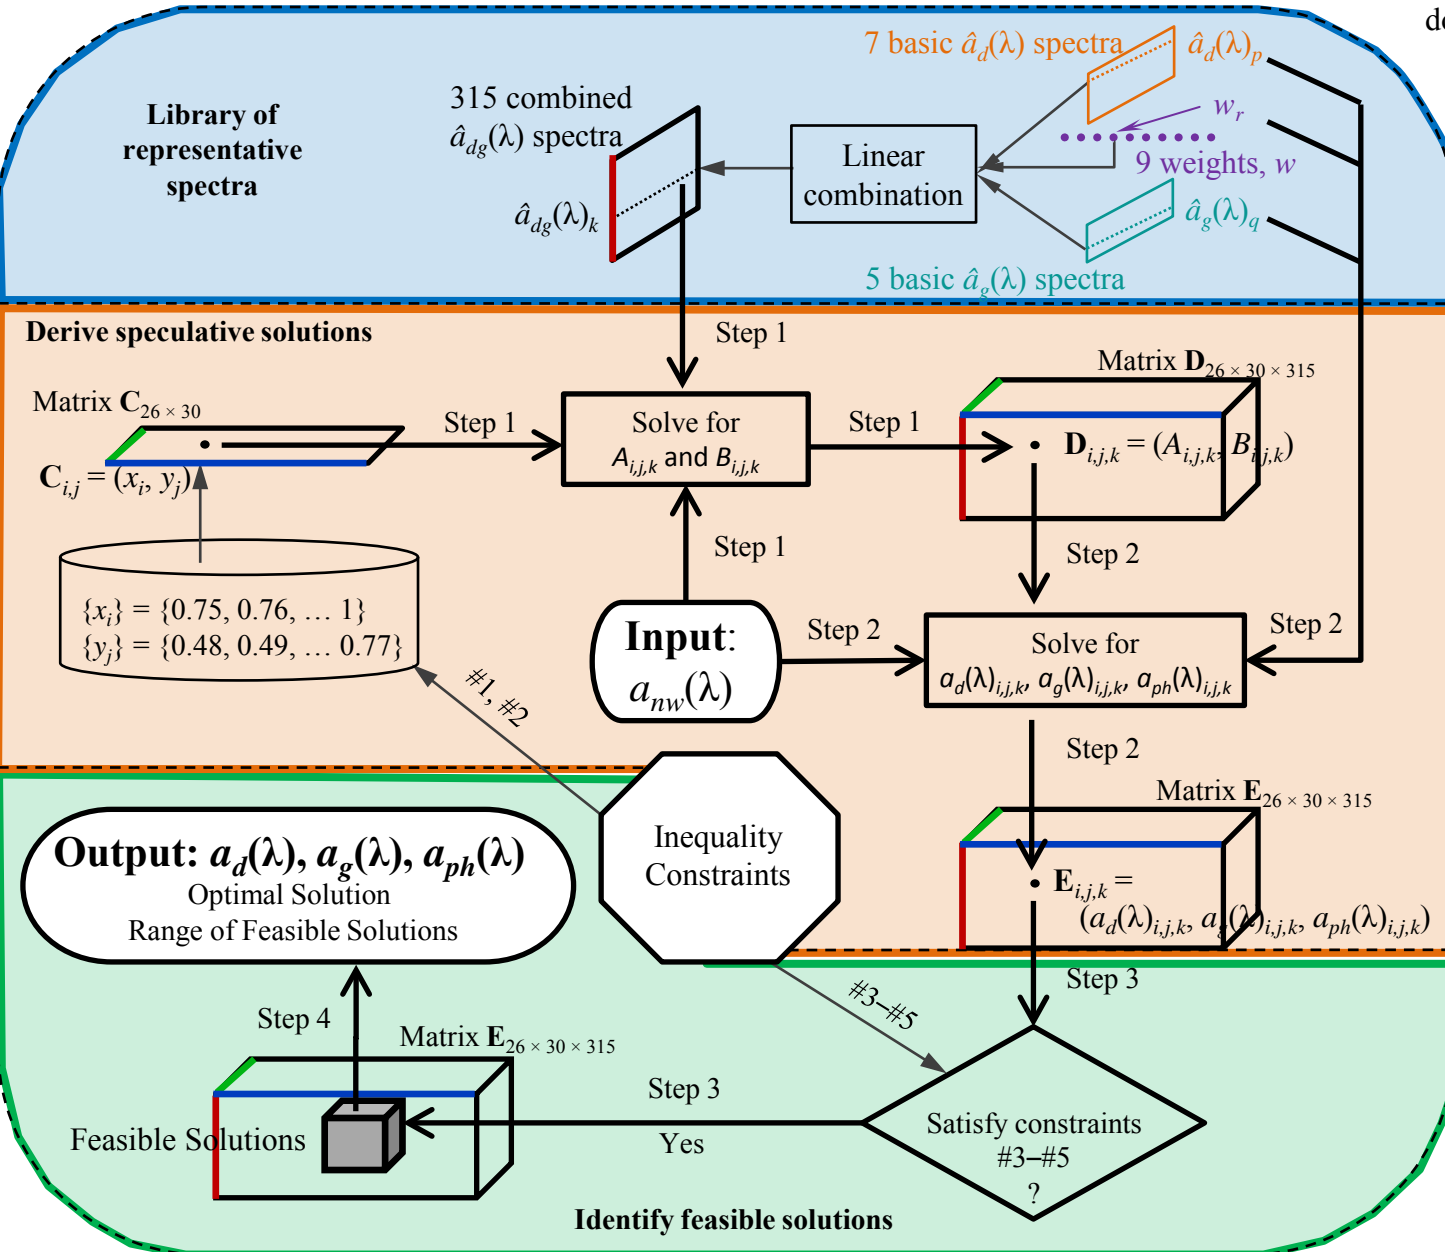

# Generalized Stacked-Constraints Model (GSCM)

Reference:  
Zheng *et al.* (2015), *J. Geophys. Res.*, 120, 2601–2621,  
doi:10.1002/2014JC010604.

End members of spectral shapes to capture the variability of various absorption components.

Obtain a comprehensive set of candidate solutions.

Identify feasible solutions and estimate optimal solutions.

# Match up between phytoplankton cell counts and satellite-derived $a_{ph}(670)/a_{ph}(440)$

G. Zheng and P. DiGiacomo,  
2016 Ocean Optics Meeting

$$\text{Diatom fraction} = 2.353 a_{ph}(670)/a_{ph}(440) - 0.459$$

NB: The blue-to-red phytoplankton absorption band ratio is a promising indicator of diatom fraction in the Chesapeake Bay.

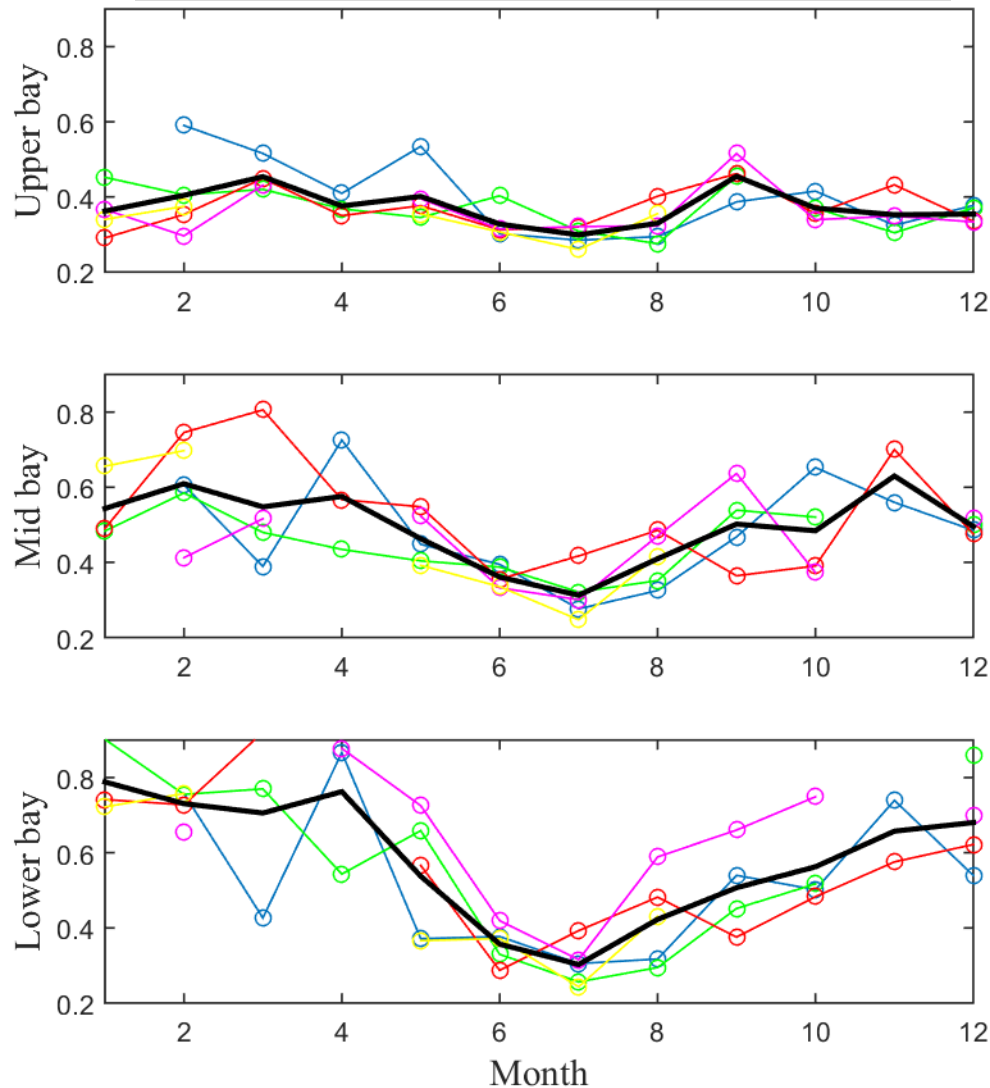

$$R^2 = 0.8534$$

# Spatial trend in seasonal variability

2012 – 2016

2012 2013 2014 2015 2016 Median

1996 – 2000

Table 3

ANOVAs of seasonal differences in the magnitude of  $a_{ph}^*(\lambda)$  in the Bay. ANOVAs were performed on the spectral average  $a_{ph}^*(\lambda)$  between 400 and 700 nm,  $\langle a_{ph}^* \rangle$

Region	$n$	ANOVA of seasonal differences in $\langle a_{ph}^* \rangle$		
		$F$	$F_{crit}$	$P$
Upper Bay	$n_{spring} = 2; n_{summer} = 36; n_{fall} = 13$	0.45	3.19	0.64
Mid-Bay	$n_{spring} = 21; n_{summer} = 39; n_{fall} = 28$	5.92	3.10	0.0039
Lower Bay	$n_{spring} = 18; n_{summer} = 34; n_{fall} = 25$	19.47	3.12	0.00000016

[Magnuson et al., *Estuar. Coast. Shelf Sci.*, 2004]

- Seasonal variability of diatom fraction increases from upper to lower bay.
- This trend is consistent with the increasing variability of chlorophyll-specific  $a_{ph}$  reported previously based on field data.

G. Zheng and P. DiGiacomo,  
2016 Ocean Optics Meeting

MERIS Image of Cyanobacteria Bloom  
in Lake Erie: Worst bloom in decades,  
over 5000 sq km on this day  
09 October 2011

# Experimental Lake Erie Harmful Algal Bloom Bulletin

National Centers for Coastal Ocean Science and Great Lakes Environmental Research Laboratory

24 August, 2015, Bulletin 13

The *Microcystis* cyanobacteria bloom continues across a large part of the western basin along the Michigan and Ohio coasts and into the central basin. The recent southwesterly winds have pushed the bloom northward along the Michigan coast. Moderate to high concentrations extend eastward to midway between Cleveland and Rondeau, Ontario. Scum has been scattered in the last few days. Microcystin toxins are still present in the bloom, but the concentration has decreased in general. However, scum areas remain a significant risk.

Strong, westerly winds are expected through Tuesday, creating strong mixing. A possible shift to NW winds on Wed and Thursday may favor southward movement. Milder winds on Thursday may reduce mixing, giving greater potential for scum formation. The persistent bloom in Sandusky Bay continues. No other blooms are evident in the central and eastern basins.

Please check for updates on Ohio State Parks at Ohio EPA's site, <http://epa.ohio.gov/habalgae.aspx>. Keep your pets and yourself out of the water in areas where scum is forming.

-Stumpf, Tomlinson

Figure 1. Cyanobacterial Index from NASA's MODIS-Aqua data collected 22 August, 2015 at 13:10 EST. Grey indicates clouds or missing data. Black represents no cyanobacteria detected. Colored pixels indicate the presence of cyanobacteria. Cooler colors (blue and purple) indicate low concentrations and warmer colors (red, orange, and yellow) indicate high concentrations. The estimated threshold for cyanobacteria detection is 20,000 cells/mL.

Figure 2. Nowcast position of bloom for 24 August, 2015 using GLCFS modeled currents to move the bloom from the 22 August, 2015 image.

# NOAA Utilization of European Ocean Color Data: Way forward for Sentinel-3/OLCI

- ESA's MERIS data declared operational by NOAA in Jan 2009 Chlorophyll-a/anomalies were generated from MERIS amongst other ocean color products, supporting NOS et al. users. However, Envisat failed in 2012.

<http://coastwatch.noaa.gov>

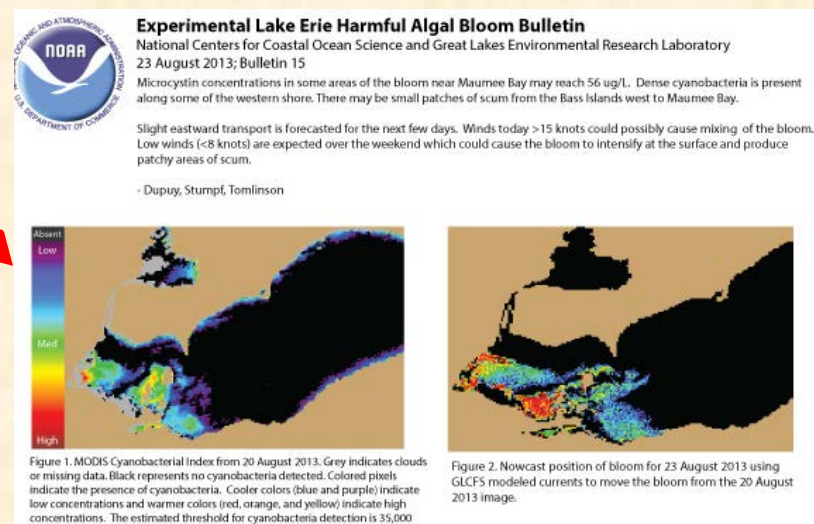

- STAR and others in NESDIS are now actively working to facilitate acquisition of the follow-on Sentinel-3 (OLCI et al.) data to support NOAA and other U.S. user needs.

**STAR's efforts have resulted in the generation and flow of NOAA experimental and operational ocean color products to the Coastwatch user community.**

- Sentinel-3/OLCI, like Envisat/MERIS, provides higher spatial resolution (300 m) than VIIRS, useful for coastal/inland waters, and also has additional spectral bands – and as such is a vital complementary capability.

- STAR is supporting ESA/EUMETSAT as part of the Sentinel-3 Validation Team (3 projects)

- NOAA (STAR) has the responsibility for distribution of Sentinel-3 data in the U.S.

# NOAA Coast Watch/Ocean Watch

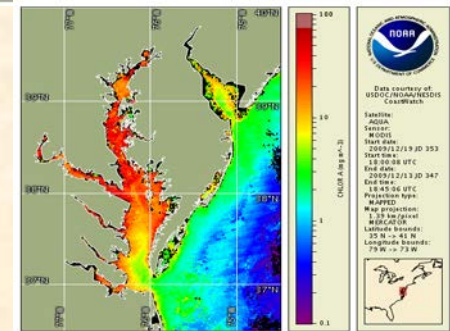

- STAR leads the **NOAA CoastWatch/OceanWatch** Program, supporting users (both *research & applied*) within NOAA as well as nationally & globally
- CW/OW facilitates development and transition of satellite ocean remote sensing experimental data products from **research into operations** and supports user-driven coastal and ocean **applications** through the dissemination of **fit for purpose data**.
- CoastWatch/OceanWatch partnership:
  - NMFS, NOS, OAR, NWS/NCEP
  - NESDIS offices
- Supports a number of regional U.S., basin-scale and international coastal and oceanic activities and applications
  - Chesapeake Bay, Gulf of Mexico, Mediterranean Sea, Atlantic & Pacific Basins, Australia et al.

## THE ROLE OF THE OCEANS IN EARTH'S LIFE-SUPPORT SYSTEM

- The Blue Planet Symposium will serve as a forum for discussion of societal information needs resulting from the important role the oceans play in Earth's life-support system.
- The symposium will also be a platform for the participating communities to exchange information on their activities and identify potential pilot and prototype projects for Blue Planet to focus on in the coming years.

<http://symposium.geoblueplanet.com/>

*What:* Global Water Quality Service for Inland & Coastal Waters

*Mission Statement:* Deliver, on a routine and sustained basis, timely, consistent, accurate and fit-for-purpose water quality data products & information to support water resource management and decision making in coastal and inland waters.

*How:* Develop, implement and maintain a global inland and coastal water quality monitoring and forecasting service, via a system of systems approach.

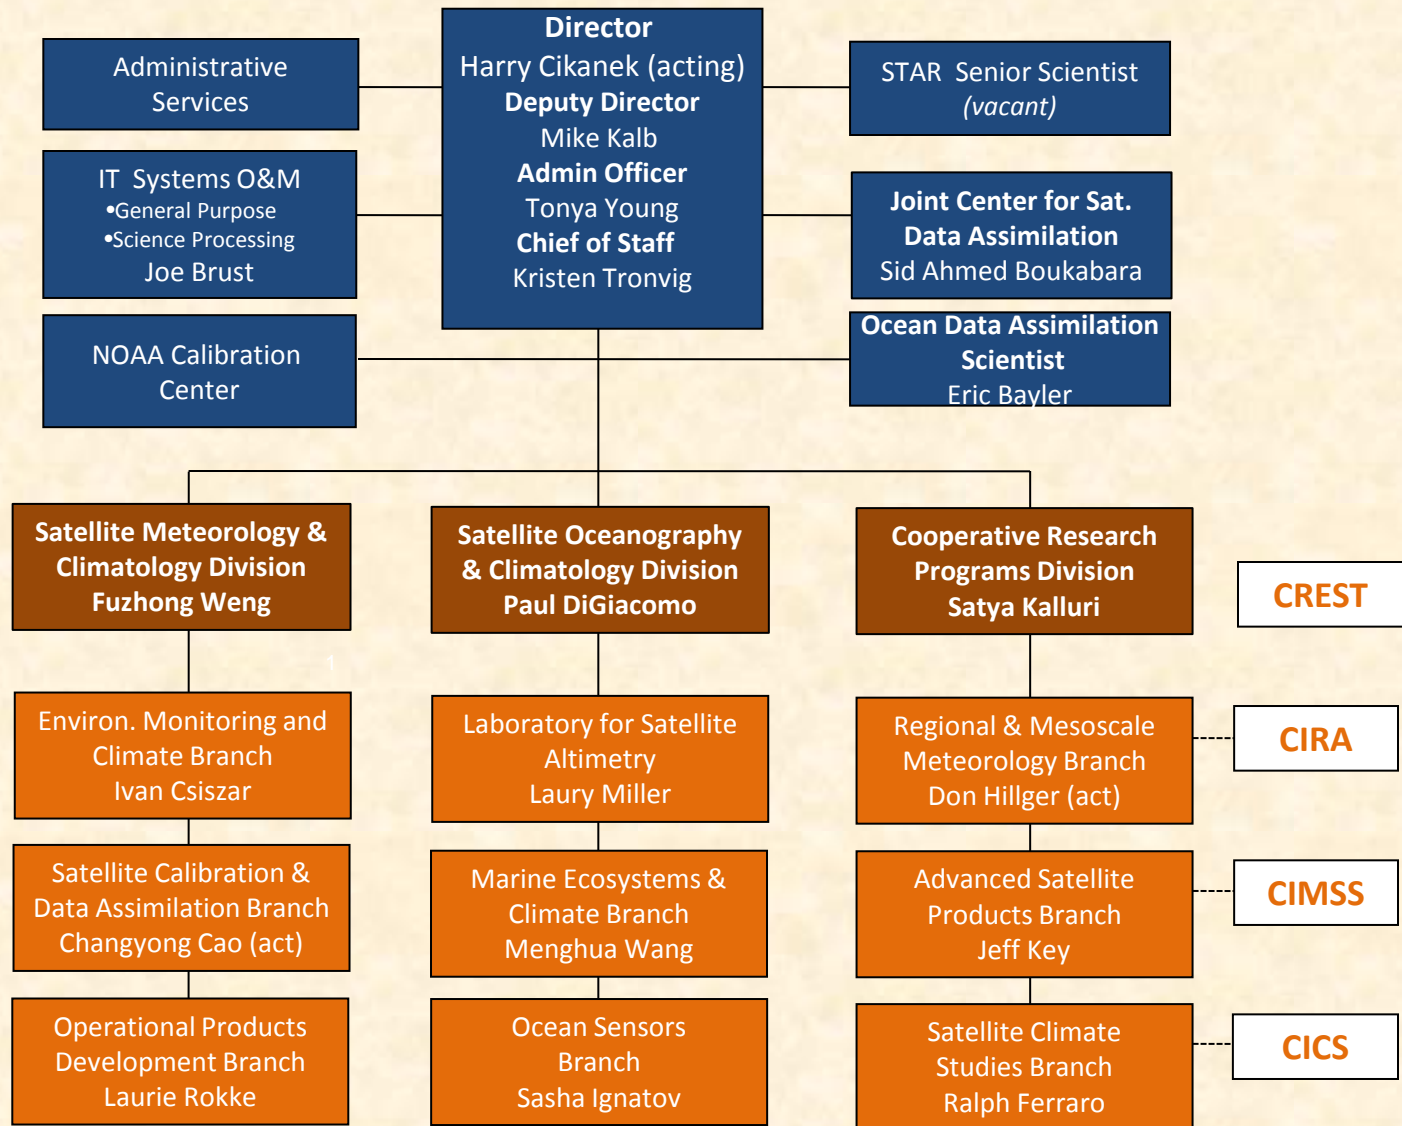

*Who:* This task will be facilitated by the recently implemented **GEO Water Quality Community of Practice.**

Thanks for Listening!  
Now, Questions....

# NOAA/NESDIS Center for Satellite Applications and Research (STAR)

# NOAA/NESDIS Center for Satellite Applications & Research (STAR):

**Delivers** leadership for NESDIS **research, development, validation and maintenance of satellite derived products and applications** from NOAA's operational geostationary and polar-orbiting satellites and from non-NOAA research and international satellites.

**Develops** new environmental **applications, techniques and algorithms for transforming raw satellite observations into scientifically meaningful**, quality assured and calibrated **environmental measurements and products**, and develops the pre-operational computer codes to implement them.

**Supports** the calibration and validation of all satellite sensors used in NOAA's satellite operations, and develops **methods and maintains systems for inter-calibrating NOAA satellite data with other satellites** in the international constellation of research and operational satellites.

**Collaborates** **with other NESDIS and NOAA offices, universities, NASA and other U.S. agencies**, and with international organizations on exchange and evaluation of operational and research satellite data and products.
